

Georgy Potemkin

Furniture & Millwork Technical Designer

potemkingeorgy@icloud.com Telegram: @da30konhisneck
Saint Petersburg, Russia – Remote / open to relocation

PORTFOLIO

Full project set with construction drawings:
[morphosnitch.github.io/portfolio](https://github.com/morphosnitch/portfolio)

CORE SKILLS

Shop / working drawing sets
Cut lists & specifications
Hardware & ironmongery schedules
Material & finish call-outs
LED lighting integration
Stone / plumbing / appliance coordination
Non-standard construction problem-solving

TOOLS

Autodesk Fusion 360 (primary)
Reading & producing dimensioned CAD sets

MATERIALS

MDF / moisture-resistant MDF
Plywood, solid wood, veneer
Stone-ready detailing
Glass & mirror detailing

LANGUAGES

Russian Native
English Strong technical reading & writing

EDUCATION

Practical, project-based training — self-taught through hands-on production of custom residential furniture and millwork commissions.
No formal degree in the field.

PROFILE

Furniture and millwork technical designer with 4 years of experience turning interior designers' concepts into complete, production-ready shop drawing sets. Based in Saint Petersburg, working with leading Moscow-based interior design studios on individual, non-standard residential commissions — one completed project was featured in a print interior design magazine. Comfortable making independent technical decisions on construction, hardware and materials, and coordinating drawings with stone, plumbing and appliance trades. Familiar with European component conventions from routinely specifying European-made hardware and appliances.

EXPERIENCE

Furniture & Millwork Technical Designer

Private joinery workshop, Saint Petersburg — remote collaboration with leading Moscow interior design studios 2021 – Present

- Develop complete construction (shop drawing) sets for custom residential joinery: wardrobes, vanities, wall panelling, libraries, walk-in closets and bathroom millwork.
- Translate interior designers' concept visuals into dimensioned, production-ready drawings — carcasses, sections, hardware call-outs and finish specifications.
- Resolve non-standard construction problems independently — e.g. re-routing a hanging rail perpendicular to a shallow-depth wardrobe carcass; sequencing joinery installation around stone fabrication; coordinating integrated appliance and plumbing clearances against cabinet carcasses.
- Specify materials, LED lighting integration and ironmongery (soft-close / push-to-open systems, hinges, sliding hardware) for each project.
- Review drawings for production feasibility before release to the workshop; revise following designer sign-off.
- One completed project was featured in a print interior design magazine.

SELECTED PROJECTS

Kids' room wardrobe & desk unit

Combined wardrobe, open shelving and a built-in desk with a dedicated PC compartment; re-engineered the hanging rail geometry to fit a shallow-depth carcass. Full drawing set attached.

5.7m classical raised-panel wardrobe

Full-height panelled wardrobe run with a concealed pull-out table built into one door module. Full drawing set attached.

Curved bathroom shell

Radius wall panelling and ceiling trim built around a backlit oval mirror, with stone-fabrication sequencing coordinated on the drawing. Full drawing set attached.
